All,

I think this is the sample that looks like it has high levels of the Solvay chloro-fluoro ether.

Andy

Andy,

The surface water sample number PFTSWDUP1 was collected with surface water sample PFTSW015, which was collected in Woodbury Creek, near the confluence of the Delaware River. This location is upriver from the Solvay site, but still tidally influenced. Note that one of the residential private wells located along Woodbury Creek (Clement Drive) had the highest levels of PFNA (1,500 ng/L) found in a private well near the Solvay site.

On map below: Little red dot is the sample location; Solvay site is circled in red; larger red marker is Clement Drive.

Erica,

The sample is PFTSWDUP1 and is highlighted on the attached CoC sheet.

Thank you,

Andy
